

Assessment of Public Health Condition in Beeston and Holbeck

Introduction

This section will present an overview of the public health situation in the electoral wards of Beeston and Holbeck. The section will also present a general overview of the present trends in the public health the influence of these trends on the wellbeing of the respective population. The purpose of the essay is to assess the public health situation in Beeston and Holbeck ward with a view of developing public health policy.

Local population

The section shall present a discussion concerning the population of the Beeston and Holbeck. The section would cover information on the demography of the population and available public health care services available in these regions.

Health

This section will present assessment and analysis of the public health trends in the electoral wards. It shall present a comparison of the specific health trends in these wards. The present assumption is that public health situation tends to differ in various locations because of a number of reasons. The reviewed literature on public health policies and their effect on the respective community shall also form part of this section. The section shall also present a critique of the major public health trends in these electoral wards. The criticism of health trends in the respective wards would paint the picture of the prevailing condition vis-à-vis the anticipation situation.

Existing policies affecting public health

The section will present an evaluation of the existing health policies in these wards and how these policies affect the health of the population. Further, it shall present a criticism of the

current health situation and mitigation approaches set by the respective government authorities to address health risks. The section will also present an argument on the relationship between the health policies and nursing functions. The assumption is that nursing interventions largely responds to health care situation in a given region. The public health policies usually affect the health situation in a given locality. A discussion on success and failure of the present public health policies in relation to nursing activities will also feature in this section. The premise of this assumption is that nursing interventions are a response to health care requirements in the society.

Proposed Policy change in the public health sector

This section shall present proposed health policy change and an evaluation of how the proposed changes would affecting the nursing fraternity. The proposed public health policy shall be contrasted against the existing policies. It shall further highlight the anticipated benefits propelling the need to enact new policies to affect the nursing sector.

Anticipated outcome of the health policy change

The section shall discuss the anticipated outcomes upon introduction of new policies in the public health. Critique of the proposed policies will help in supporting various theories in public health that relate to nursing functions.

Conclusion

The conclusion will present a recap of the issues discussed in the previous sections. It shall also present a recommendation on areas that need changes in the public health sector.
